Zetron's IP Fire Station Alerting (IP FSA) system is ideal for any municipality that has IP network links between its central communications center and its fire stations. Using IP to send control commands between the central site and the fire station increases the alerting speed and broadens connectivity options. Voice announcements can be configured for VoIP or radio transmission. Existing Model 6/26 dispatch systems can be upgraded to IP FSA.

Eventually this Price Sheet will be on the Partner Portal. Per Jim Shulkin, They haven't sorted out which C&C partners can sell LMR and vice versa and it's not going to be as simple as it used to be (i.e., everybody won't be able to see everything). So we'll start working on portal content for LMR, but until we know who's allowed to see it (and what LMR partners can see C&C) it's not a big priority.

## M6300 RoIP GATEWAY

Price Sheet 001-0279 Rev. 02

Zetron's RoIP Gateway allows legacy Tone Remote Control (TRC) or E&M wireline control equipment to operate over modern IP networks. It is suitable for use with all Zetron consoles for remoting radios from the console system over Ethernet IP. The RoIP Gateway can also be used with many other manufacturer's TRC/E&M wireline control equipment, as well as many non-radio, specialty voice applications (e.g. hoot-n-holler and intercom lines). By connecting radios at both ends, it can also be used to bridge two geographically diverse radio systems together. The RoIP Gateway transports 4-wire audio, COR/PTT, RS-232 serial data and one generic binary I/O signal over an IP network.

The Model 6304 IP Console Gateway is specially designed for connecting a remote console position (Integrator RD, 4018 or 4118) to a Series 4000 system over an IP network.

NOTE: IP networks must meet the network requirements found on the RoIP Gateway spec sheet (005-1400). Reliable transport of in-band tone signaling requires that audio compression not be used and requires that the IP network have no packet loss. Also, IP network latency may have an adverse affect on serial data protocols used by certain radios. Certain serial data-controlled radios may not support direct RS-232 connection and therefore may require additional serial data conversion devices.

### GATEWAYS

DC power cabling kit supplied. Order AC power converter option separately. Includes CD with manual. Gateways work in pairs; order 2 per remote console or radio.

## MAX Dispatch

Price Sheet 001-0281 Rev. 03

MAX Dispatch is an end-to-end IP based telecommunications console system. Because MAX Dispatch employs the latest, standards-based IP protocols and IT best practices, it offers the highest levels of interoperability, scalability, and usability. This product is packaged to meet the needs of smaller sized systems all the way to large multi-site systems with advanced console features. Software features sets may be added to each console position as necessary. If redundancy is required, that may be added on to the system.

MAX FSA is an IP enabled solution for the common alerting methods used at nearly all Fire Stations to quickly mobilize their people and assets to an emergency service call. The highly customizable User Interface is powered by a core system that supports features such as multi-channel audio, audio capability from the Fire Station into Dispatch, Aux I/O controllers, Text To Speech PA, LED Display boards, event logging and logging recorder systems. Because it is integrated into CAD systems as well as the MAX Dispatch Console this solution aligns with everyday typical fire dispatch use cases through our CAD API. MAX FSA also supports communications via a non-Zetron 3rd party console audio source. MAX FSA target market is focused on small to midsized fire agencies. Another important distinction is this solution can offer redundancy for buyers who have that requirement.

The Model 250 is a tone remote adapter that includes features typically only found in high-end remote control stations. It provides a means of connecting a base station radio to industry-standard tone remote encoders, such as Zetron's desktop remotes and dispatch consoles. The Model 250 connects to an audio circuit or leased line from the tone remote and to the unique interface of the base station radio. Designed for fast installation and easy setup. The Model 250 includes integrated setup utilities that reduce the need for service equipment.

## Product Category: M26 Fire Station Alerting

## Model 26 - Fire Station Alerting System

MS EPL 3744 Mississippi Two-Way Radio, 002-0036 Rev. 23

Price Sheet 001-0065 Rev. 02

The Model 26 system is a fire station alerting system that provides dispatchers with a fast, reliable means for alerting selected stations and individual vehicles. Additional capabilities include control of vital station functions (doors, sirens, or PA systems), an RS-232 port for Computer-Aided-Dispatch operation, and remote status monitoring of sense inputs. A typical system consists of one or more dispatch units (Model 26s) and one or more station units located in the stations to be alerted. System size can be up to 26 stations. Consult with Zetron for additional information.

## Team On Demand Services

### Outsourced QA Program

Team on Demand QAEs (Quality Assurance Evaluators) will perform multiple aspects of Quality Assurance. QAEs use feedback to improve training programs and implement procedures that support continuous customer service improvement...including but not limited to developing laser-focused training and job aids. We set up your preferred method of QA in a Crawl, Walk, Run methodology and do the QA evaluations for you. Goals and compliance requirements can be upgraded in the future as policies are enhanced.

Our QAEs listen and report for:

\*\*Attitude – tone of voice, empathy and community service; soft skills; professionalism.

\*\*Protocol – Applying policy and procedures as agreed upon; grow your agency towards NENA APCO ANSI standards and compliance with other related certifications as needed.

(Example: IAED, Police/Fire/EMD, CALEA, and other required protocols)

The Series 4000 is a central controller-based dispatch communications console that provides an effective means of controlling up to 48 radio channels from 1 to 16 operating positions. Designed to meet the needs of public safety, medical dispatch, utility, and industrial users alike, the Series 4000's modular construction and field programmability offer exceptional application flexibility.

A system consists of one or more operator positions plus a CCE (common control equipment) rack. Racks sold separately. Operator positions can be PC-based (IntegratorRD), button/LED-based (rack mount), or a combination of both.

For larger applications, contact Zetron Sales for more information.
