Eventually this Price Sheet will be on the Partner Portal. Per Jim Shulkin, They haven't sorted out which C&C partners can sell LMR and vice versa and it's not going to be as simple as it used to be (i.e., everybody won't be able to see everything). So we'll start working on portal content for LMR, but until we know who's allowed to see it (and what LMR partners can see C&C) it's not a big priority.

MAX Dispatch is an end-to-end IP based telecommunications console system. Because MAX Dispatch employs the latest, standards-based IP protocols and IT best practices, it offers the highest levels of interoperability, scalability, and usability. This product is packaged to meet the needs of smaller sized systems all the way to large multi-site systems with advanced console features. Software features sets may be added to each console position as necessary. If redundancy is required, that may be added on to the system.

MAX FSA is an IP enabled solution for the common alerting methods used at nearly all Fire Stations to quickly mobilize their people and assets to an emergency service call. The highly customizable User Interface is powered by a core system that supports features such as multi-channel audio, audio capability from the Fire Station into Dispatch, Aux I/O controllers, Text To Speech PA, LED Display boards, event logging and logging recorder systems. Because it is integrated into CAD systems as well as the MAX Dispatch Console this solution aligns with everyday typical fire dispatch use cases through our CAD API. MAX FSA also supports communications via a non-Zetron 3rd party console audio source. MAX FSA target market is focused on small to midsized fire agencies. Another important distinction is this solution can offer redundancy for buyers who have that requirement.

The Model 250 is a tone remote adapter that includes features typically only found in high-end remote control stations. It provides a means of connecting a base station radio to industry-standard tone remote encoders, such as Zetron's desktop remotes and dispatch consoles. The Model 250 connects to an audio circuit or leased line from the tone remote and to the unique interface of the base station radio. Designed for fast installation and easy setup. The Model 250 includes integrated setup utilities that reduce the need for service equipment.

Team On Demand Services

Outsourced QA Program

Team on Demand QAEs (Quality Assurance Evaluators) will perform multiple aspects of Quality Assurance. QAEs use feedback to improve training programs and implement procedures that support continuous customer service improvement…including but not limited to developing laser-focused training and job aids. We set up your preferred method of QA in a Crawl, Walk, Run methodology and do the QA evaluations for you. Goals and compliance requirements can be upgraded in the future as policies are enhanced.

Our QAEs listen and report for:

**Attitude – tone of voice, empathy and community service; soft skills; professionalism.

**Protocol – Applying policy and procedures as agreed upon; grow your agency towards NENA APCO ANSI standards and compliance with other related certifications as needed.

(Example: IAED, Police/Fire/EMD, CALEA, and other required protocols)

Price Sheet 001-0055 Rev. CW

The Series 4000 is a central controller-based dispatch communications console that provides an effective means of controlling up to 48 radio channels from 1 to 16 operating positions. Designed to meet the needs of public safety, medical dispatch, utility, and industrial users alike, the Series 4000's modular construction and field programmability offer exceptional application flexibility.

A system consists of one or more operator positions plus a CCE (common control equipment) rack. Racks sold separately. Operator positions can be PC-based (IntegratorRD), button/LED-based (rack mount), or a combination of both.

For larger applications, contact Zetron Sales for more information.
